

Guide to types of mark and grade in the Component Marks Report

This file contains a worksheet for each syllabus taken at the Centre and a summary sheet giving an overview of the Centre's results.

		Example
Raw mark	The mark that the examiner gave the candidate for the work on the paper (or 'component'). It is the mark on the candidate's completed examination script. Raw marks are not displayed for components carried forward from previous series.	18 out of a possible 40
Adjusted mark	The raw mark may be adjusted as the result of scaling, the granting of special consideration or both. Usually we do not need to adjust marks, so the adjusted mark is often the same as the raw mark. Adjusted marks are not displayed for components carried forward from previous series. Scaling is applied to ensure consistency across the marking process and the different examiners that we use. Special consideration is granted if we agree to an earlier formal request from a Centre.	19 out of a possible 40 (Raw mark of 18, plus 1 because the marker was severe; no special consideration)
Component grade	An indicator of the candidate's performance on a particular component, which usually ranges from Grade A to Grade E (or Grade G for Cambridge IGCSE). It is not possible to receive Grade A* as a component grade, only as a syllabus grade. The component grade is determined by comparing the adjusted mark to the component grade thresholds. Component grades are not used to determine the syllabus grade and are provided for information only.	Grade C for the component
Final mark	The adjusted mark that has been multiplied by a weighting factor to give the result of the paper its correct weighting within the result of the overall qualification. For example: <ul style="list-style-type: none"> · A Cambridge IGCSE with two components carries 100 marks. · One component accounts for 60 per cent of the result. · The maximum raw mark for that component is 40. In this example, we multiply all adjusted marks for that component by 1.5 to convert them from a mark out of 40 to a mark out of 60. Usually we do not need to weight marks, so the final mark is often the same as the adjusted mark.	28.5 out of a possible 60 (Adjusted mark of 19 multiplied by 1.5)
Syllabus (or option) total	The total of the final marks for the different papers the candidate took in the subject (and any coursework components). Final component marks that are not included in the total mark are presented in brackets. The total mark is rounded to the nearest whole number. Take care when comparing the syllabus total mark for two candidates taking different options as the grade thresholds for different options may not be identical. Candidates entered in options with more than one route to a result will be awarded the mark that results in the best possible grade. This is not necessarily the highest mark, since different grade thresholds may apply to each combination of components. Candidates who are awarded Ungraded (U) at Cambridge International A Level will be re-graded as Cambridge International AS Level candidates using the components which are common to both levels. They will be awarded a Cambridge International AS Level grade (presented as a lower case letter) if the required standard is achieved. If they remain ungraded at AS Level then the option mark presented is either the A Level or AS Level total, whichever is closer to the E/e grade boundary.	95 out of a possible 200 (28.5 out of 60, plus marks on other paper(s) or coursework and rounded to a whole number)
Syllabus (or option) grade	The candidate's result for the syllabus overall, which usually ranges from Grade A* to Grade E (or Grade G for Cambridge IGCSE). It is not possible to receive Grade A* at Cambridge International AS Level, where the available grades range from a to e. To determine a candidate's syllabus grade we compare their syllabus total mark with the grade thresholds for the option. For entry options where there is more than one route to a result, the thresholds applied are the same as those for the option containing the combination of components included in the candidate's total mark. You cannot usually work out a candidate's syllabus grade from their component grades because a candidate whose component grades were A, A and B might receive an A*, an A or a B overall. Their syllabus grade will depend on where they came within the A and B ranges for each component, and on the relative weights of the three components.	Grade D (Syllabus total of 95 and, in this case, at least 103 marks required for a Grade C and at least 88 for a Grade D)
